

Th3rd introduces 3D Scanning as a Service

3DSaaS revolutionizes the 3D scanning market

Amsterdam, Netherlands, 20/12/2018 Today, Th3rd introduces the solution for brands who want to have high resolution scans of their products without having to invest in hardware, installation, training and licenses.

The focus lies on offering a business solution for large companies which want to 3D scan a high volume of products (2.500 to 100.000 products per year) fit for ecommerce. Our approach will give you consistent quality over all scans and can be tailored to the client demands.

We will train your staff and offer full service and support. You pay per scan (starting at €75,- per automated scan, which lowers in price as the volume increases). This way we can help companies digitize their products for e-commerce and marketing creating a much more efficient way of creating all

your media assets (photos, videos, 360 degree photo's, but also for VR/AR mobile applications and holograms).

For Web retailers we can help to improve conversion rates through higher shopper Experiences and to lower customer returns.

Come see for yourself how Th3rd turns the 3D scanning world up side down. Our booth is in the Holland Pavilion at Eureka Park.
